

Is Your Backup Generator Ready For The Next Storm?

When a hurricane or tornado comes through your area, having a working backup generator could mean life or death for your customers and your business. If your system passes each of these tests, it's ready for the storm.

1.	Run the generator for a full system test, including load tests beyond 30% capacity.	<input type="checkbox"/>
2.	Refill the fuel tank with the correct fuel type and check for leaks.	<input type="checkbox"/>
3.	Check ignition. Replace spark plugs if needed.	<input type="checkbox"/>
4.	Test automatic transfer switches.	<input type="checkbox"/>
5.	Check the circuit breaker and ensure it's closed.	<input type="checkbox"/>
6.	Inspect the cooling system, check for leaks and refill coolants.	<input type="checkbox"/>
7.	Inspect the lubricant system, check for leaks and refill oil.	<input type="checkbox"/>
8.	Inspect and clean the battery and battery charger. Replace the battery if needed. Check battery cables and connections.	<input type="checkbox"/>
9.	Check the alternator.	<input type="checkbox"/>
10.	Change air and fuel filters.	<input type="checkbox"/>
11.	Check hoses and belts.	<input type="checkbox"/>
12.	Review panel readings and gauges to ensure they are accurate.	<input type="checkbox"/>
13.	Check the bolts securing your generator in position. Tighten if necessary.	<input type="checkbox"/>

Get a Better Backup Plan

If your backup generator failed any of these tests, it's likely in need of repair. Using the Southern Company Technology Subscription is a better way to get the resiliency your business needs. For less than you're spending on your backup generator today, in partnership with our best in class service providers, we'll take responsibility for your system and repair and replace it for a flat monthly fee with \$0 due upfront and a guarantee that it'll work when you need it most.
